Artur Istratov

London, UK | +44 7927 594250 | artur.istratovv@gmail.com

PROFESSIONAL SUMMARY

Computer Science graduate and MSc Artificial Intelligence student with experience across software engineering, cybersecurity, machine learning and large-scale data processing. Built projects spanning malware detection, graph algorithms, neural networks and personalised ML systems, with industry experience as a Junior Software & Security Engineer.

TECHNICAL SKILLS

Programming: Python, Java, SQL, HTML/CSS, React
Machine Learning & Data: XGBoost/Gradient Boosting, Neural Networks, MLP, PCA, Pandas, NumPy, Data Mining
Cybersecurity: Vulnerability Analysis, Malware Analysis, Cross-Site Scripting (XSS), Security Engineering, Linux, Access Controls
Data & Cloud: Apache Spark, PySpark, GraphFrames, AWS S3
Software & Algorithms: Git & Version Control, Data Structures & Algorithms, Graph Algorithms, CFG, GED, Debugging & Troubleshooting

EXPERIENCE

Inter Volt - Junior Software & Security Engineer | *Summer 2025*
- Developed small automation tools and assisted with database management, improving efficiency in reporting and billing.
- Supported cybersecurity activities by monitoring systems for vulnerabilities, strengthening access controls and documenting security best practices for critical infrastructure.

Sticks'n'Sushi - Bartender | *2024-Present*
- Worked in a fast-paced customer-service environment requiring teamwork, multitasking and problem-solving under pressure.

Yellow Brick Technologies - Content Manager & Copywriter | *2019-2021*
- Produced marketing content and managed social media across multiple companies.

PROJECTS

Malware Variant Detection - Final Year Project | *Python, Graph Algorithms, Cybersecurity*
- Engineered a CFG-based malware detection system using Graph Edit Distance, A* search and Hungarian heuristics, achieving 89% precision and recall across multiple obfuscation techniques.

Golf Club Recommender & Swing Analyser | *Python, XGBoost, Bayesian Learning, MediaPipe*
- Building a personalised golf assistant combining ML-based club recommendations, Bayesian learning from player shot history and computer-vision swing analysis with explainable recommendations.

Large-Scale Data & Graph Analytics | *PySpark, Apache Spark, GraphFrames, AWS S3*
- Built distributed pipelines for large-scale GitHub data and graph-based airline network analysis, incorporating streaming, checkpointing and fault-tolerant processing.

Neural Networks & Machine Learning | *Python, MLP, PCA, Data Mining*
- Developed an encoder-decoder neural network for representation learning and applied PCA, statistical analysis and data-mining techniques to multidimensional datasets.

Security Engineering | *Linux, C, Application Security*
- Conducted practical vulnerability analysis covering buffer overflows, format-string exploits and Linux access controls.

EDUCATION

Queen Mary University of London - MSc Artificial Intelligence | *2026-2027*
Queen Mary University of London - BSc Computer Science | *2023-2026*
Kaplan International College London | *2022-2023* | *Distinction*
